

## MISSION STATEMENT 2017-2022

Responding to the universal call of creating a sustainable global community where differences are cherished and the human spirit is nurtured, the school's objective is to catalyze groundbreaking innovations in all domains - curricular as well as co-curricular. To realize the vision of the United Nations and to ensure that by 2030 all people enjoy peace and prosperity, the school strives to amalgamate the 17 SDG goals into every school endeavour by incorporating them into traditional subjects like English and Mathematics to the most latest additions such as digital literacy, STEAM education and Global citizenship across all ages.

The school aims to design an enabling ecosystem thriving with interesting learning opportunities for students to collaborate through projects, activities and events with local as well as global counterparts. We expect to embed the commitment for action to protect the planet in each and every student which will reflect in their actions leading to a positive impact in communities where they will live and work. To accelerate the students transition into sustainable citizens, we strive to build a creative and diverse global team led by critical thinking leaders with a cosmopolitan approach.
