

The Five Senses

DAY 6 ACTIVITY - THE DETECTIVE SENSE

CLASS - 2

“All our knowledge begins with the senses, proceeds then to the understanding, and ends with reason.”

Our sense organs play a very important role in our everyday lives as they allow us to do things. Our senses are seeing, feeling, tasting, touching and hearing. We use at least one of our 5 senses every moment of everyday and they are on duty even when we are asleep. Our senses work together to let our brain work upon anything that is going around. In order to make sense organs more clear to the students, Day 6 activity was conducted in two parts. In the first phase they were asked to identify many things with the help of their different sense organs. It was conducted on 7.1.19

The second phase was the application of their learning which was on 23.1.19. A worksheet was provided to them in which they were asked to write the different given items in front of the different pictures of all the sense organs.

It was a great experience for them. They have practically experienced all the five senses, gained knowledge and have successfully applied it.
