

VISIT TO NATIONAL SCIENCE CENTRE (12.09.2018)

MAPS, in association with National Science Centre, organized an Educational Science Programme for students of class III. It included the latest scientific activities, programs, and hands-on sessions to enlighten young minds!

Students witnessed various experiments virtually, which helped them understand the wonders of science. The experiments included freezing rubber ball and breaking it using liquid nitrogen, controlling air in a balloon inside a bottle using air pressure, etc. This was followed by a walk that highlighted the history of dinosaurs and a 3-D show on Science.
